

Are you our next backend superstar ?

RESPONSIBILITIES

- ▷ Apply continuous refactoring practice to keep the code clean and efficient.
- ▷ Suggest and implement performance optimisations.
- ▷ Implement new features.
- ▷ Implement unit and functional tests.
- ▷ Ensure that the best practises and company coding guidelines are always applied.
- ▷ Work closely with the frontend team to define and implement API standards.
- ▷ Take ownership of individual tasks and see them through the entire lifecycle.

EXPECTATIONS

- ▷ Bachelor's degree in computer science or related field, or equivalent years of experience.
- ▷ 5+ years experience in PHP (OOP, architectural patterns).
- ▷ Recent professional experience in MySQL, Elasticsearch.
- ▷ Experience with Go and Python is a plus.
- ▷ Comfortable in written and spoken English.

ARCHITECTURE

- ▷ PHP 5.6 (Phalcon 1) moving in parallel toward PHP 7+ (Symfony 5+)
- ▷ Python and Go services
- ▷ MySQL, Redis, ElasticSearch

LONG TERM GOALS

- ▷ Legacy migration: Make the legacy migration process more efficient.
- ▷ Legacy CRM: Support legacy CRM while refactoring projects progress in parallel.

So you want to apply ? Great! Before we schedule an interview, we would like you to take on a small technical challenge we made up just for you.

TECHNICAL CHALLENGE

- ▷ Implement 1 API endpoint that returns a paginated list of 2 data types computed into 1.
- ▷ Provide a documentation page for API consumers.
- ▷ You must not use any framework/library, you organise the code the way you want!

EXPLANATION

- ▷ Data sources are OMDb API and a local JSON file.
- ▷ You define the response format and structure the way you want.
- ▷ Each record in response must have at least: ID, data type, name, description, photo URL.
- ▷ API consumers can filter by free text.
- ▷ API consumers can paginate results.
- ▷ Authentication is done by token in request headers.
- ▷ The valid token value is the result of date('Ymd').
- ▷ API CORS accept any origin.

SUPPORT

- ▷ Please use <http://www.omdbapi.com> (register for free) “By Title” endpoint.
- ▷ Store the JSON in page 3 in the project, you will open it as a file using PHP.

THE END

- ▷ Please host your **final production** online so we can see it running directly in our Postman.
- ▷ Please share your code on **GitHub**, don’t send a zip, it’s not the 90’s anymore ;)
